

## **ANESE and EVO (Efficiency Valuation Organization) sign an agreement to boost training and certification of professionals in the energy efficiency spanish market**

**Madrid, March 12, 2025 – Denis Tanguay, executive director of EVO (Efficiency Valuation Organization), and Carlos Ballesteros, general director of ANESE (the Spanish National Association of Energy Service Companies), have signed a collaboration agreement to promote training and boost the certification of professionals who apply concepts of measurement and verification of savings in energy efficiency projects.**

With this agreement, ANESE becomes a strategic partner of EVO to spread the importance of PMVA and PMVE certifications for professionals in the energy sector in Spain in general and ANESE associates in particular. This enables them to provide professional advice to Energy Service Companies (ESCOs), public administration, public service companies, engineering firms, financial institutions, and others interested in Measurement and Verification (M&V).

Denis Tanguay believes that *“it is essential for us to support ANESE in disseminating IPMVP-aligned training and certifications, a crucial element to instill rigor and clarity on measurement and verification of savings. Broadly used worldwide for 30 years by ESCOs, utilities, and governments, the IPMVP offers a standardized framework for M&V of energy savings. This meets EVO’s mission to ensure that the savings and impact of energy efficiency and sustainable projects are accurately measured and verified”.*

For his part, Carlos Ballesteros said, *“from ANESE, we believe that this agreement with EVO marks a clear commitment by the association to the training and professionalization of the energy efficiency sector in Spain. In the context of growth driven by the Energy Saving Certificates (CAE) system, it is crucial to provide professionals with the necessary qualifications to face the challenges of the market.*

*This collaboration will reinforce knowledge and rigour in implementing measurement and verification protocols, providing key technical tools to verifiers, regional managers, obligated and delegated subjects, and other system agents. In turn, it will facilitate the accreditation of unique actions within the CAE system, establishing uniform criteria for implementing the IPMVP protocol among the different actors.*

*We are convinced that through collaboration we will be able to promote the incorporation of qualified professionals into the sector, guaranteeing a level of competence and specialization in line with international standards”.*

### **About EVO**

*EVO, Efficiency Valuation Organization, is a non-profit organization whose products and services help people design and invest in energy efficiency projects. EVO is the owner and administrator of the International Performance Measurement and Verification Protocol (IPMVP®), the globally recognized reference for the reliable measurement and verification of energy efficiency project savings.*

### **About ANESE**

*ANESE, the Spanish National Association of Energy Service Companies, comprises more than 180 companies whose objective is to promote **energy efficiency, sustainability, the fight against climate change, and the 2030 agenda** through the **energy services model**, either directly (Energy Service Companies) or indirectly.*
